2. CITATIONS AND EXPLANATIONS

Claims 1-17 meet the criteria set out in PCT Article 33(2)-(3). Araujo et al does not teach or fairly suggest a method for optimizing a download of requested data to an electronic data processing unit that is currently receiving unrequested multicast data through a router included in a network. Araujo et al does not teach or fairly suggest that the unrequested multicast data corresponds to at least one multicast data group. Araujo et al does not teach or fairly suggest sending Internet Group Management Protocol (IGMP) V2 Leave Messages for at least one multicast data group to the router. Araujo et al does not teach or fairly suggest ignoring IGMP Membership Queries for at least one multicast data group issued by the router so as to cause the router to terminate a transmission of the unrequested multicast data to free up available bandwidth for the download of the requested data.

Claims 1-17 meet the criteria set out in PCT Article 33(4), and thus meet industrial applicability because a method for optimizing a download of requested data to an electronic data processing unit that is currently receiving unrequested multicast data through a router included in a network can be made or used in industry.
